

# INTERmedic Flash

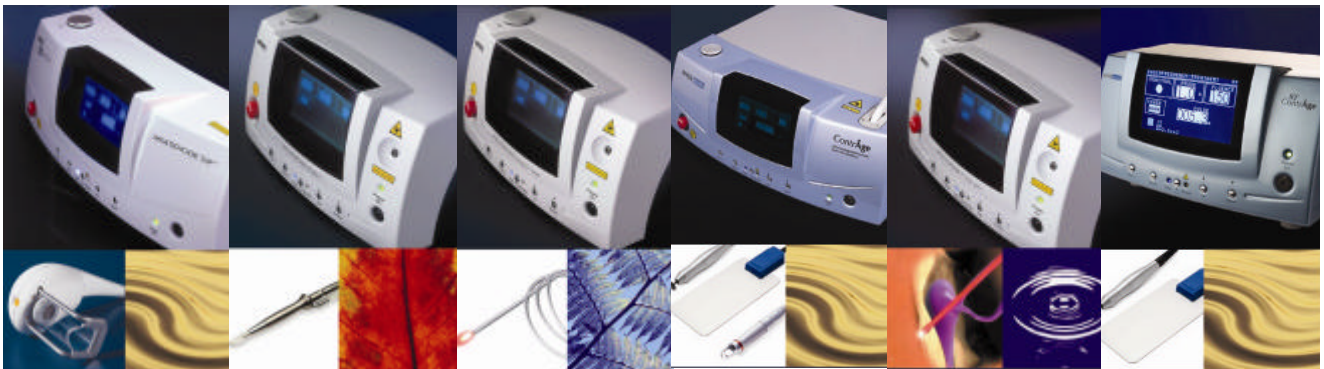

Laser and Light Solutions

U.S. Food and Drug Administration

**INTERmedic devices, approved by the FDA!**

**INTERmedic**, has demonstrated along the years its committment to R&D and to offering the market new non invasive procedures and technology which improve substantially doctor's clinical practice.

The INTERmedic medical devices, certified with the **CE**<sub>0459</sub> for medical use, have been approved by the FDA on the equipment's specific clinical applications. No doubt this approval gives us pride and satisfaction, and reinforces our presence in the competetive international market, where only the most innovative and quality oriented companies are likely to succeed.

Quality oriented, because INTERmedic is one of the very few companies involved in multinational research projects, a clear example of these projects are the EUREKA program developments, where only the most qualified companies, in terms of quality requirements and technological development, are participating in global internationals project such as these. In the project EUREKA MAFALDA EULASNET four international companies participate, and INTERmedic has been selected to carry out the new device development and its clinical applications.

Today, INTERmedic can affirm that its products are validated by the U.S. department of health and Human Services through the FDA. This fact gives us a stronger competitive position in the market. And it is the beginning of a new phase for the company.
