

VARIUS™ & VR1000™ laser systems

High-tech that cures and beautifies

What are VARIUS™ and VR1000™?

They are NOT just some other kind of laser, but vascular and dermatological treatment systems, comprising the most advanced and safest laser technology for gentle and efficient treatments of fine vessels and a wide range of dermatological, vascular and aesthetical applications.

Which treatments are possible with VARIUS™ & VR1000™?

Both VARIUS™ & VR1000™ are optimized for safe and effective elimination of facial and leg vessel problems (e. g. spider veins, red and blue vein blemishes, venous lakes etc.). They also achieve perfect results in treating various kinds of angiomas, persistent skin reddening, warts or small, benign skin tumors. Additionally they allow skin rejuvenation and many surgical procedures, such as corrections of the eye lids.

How do the VARIUS™ & VR1000™ lasers work?

Laser systems generate light and highly compress it. Thus, a ray of High density is produced: the beam. VARIUS™ & VR1000™ lasers optimize this beam to a length and duration ideal for the treatment of fine vessel structures and for the performance of many dermatological procedures. In the target tissue or vessel area the light produces heat. Depending on the desired effect, the heat discolors reddened skin areas, diminishes superficial blue or red vessel lines, and dries out blemishes such as warts and angiomas.

Are the VARIUS™ and VR1000™ treatments safe?

In expert hands the VARIUS™ & VR1000™ laser beams neither burn the skin nor hurt, being applied through a specially developed cooling system. This ensures maximum skin protection and patient comfort during and after treatment.

Enhance your health & beauty

VARIUS™ & VR1000™ vascular & dermatological laser systems

appointed to natural perfection

Vascular treatments
Reveal yourself unembarrassed

Facial and leg spider vein removal

Almost 60% of the population suffers from spider veins (telangiectasias) or red and blue small vein blemishes, most commonly in the face, hands, and legs.

Camouflage make-up or covering garments are common means of concealing these problems, but certainly do not provide a satisfactory solution.

The VARIUS™ and VR1000™ laser systems effectively remove these blood vessel problems.

Shortly after treatment you will enjoy a much improved skin condition, reconcilable with beach wear and public appearance free of special make-up.

Treatment times depend mainly on the size of the area to be treated. Variable spot sizes make the VARIUS™ and VR1000™ lasers most efficient.

The VARIUS™ and VR1000™ laser method is safe, simple and causes no pain.

Dermatological treatments
Don't put up with imperfections

The treatment of skin alterations

Disturbing skin alterations such as molluscum, verrucae (warts), seborrheic keratosis or pigmented lesions are not serious threats to health in most cases.

Unfortunately, however, they are most likely to appear exactly, where you least like them - in your face.

Many of these somewhat unsightly skin alterations can be treated by surgical incision.

A more effective, gentle and elegant method is VARIUS™ and VR1000™ laser treatment.

By the grace of the safe and rapid VARIUS™ and VR1000™ laser treatment you will not have to put up with skin imperfections any longer.

This safe method has the additional advantage of avoiding any lasting scars.

Aesthetic & vascular treatments
Enjoy your looks without limitation

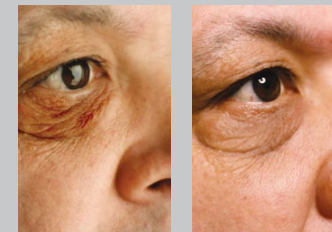

Skin rejuvenation

The secret of glossy, smooth, elastic and youthful skin is based on the body's natural ability to regenerate its own cells. VARIUS™ and VR1000™ skin rejuvenation treatments reveal this secret to you by stimulating the skin supporting collagen structures to increased and rapid regeneration. The result is a vitalized, fresh appearance of your face and an appreciable reduction of lines and wrinkles. These gentle VARIUS™ and VR1000™ procedures do not interrupt your daily routines, and have no side effects such as discomfort or enduring reddened skin areas.

Angioma elimination

Medical science distinguishes between different forms of angiomas of various origins. Some of them need treatment others are harmless, but impair the looks of the patient, especially in the face. Safe and effective VARIUS™ and VR1000™ laser treatment achieves very good results in cases of venous angioma, stellar popular angioma, small lip angioma, and flat, ruby or tuberose angioma.
